Wiper Motor Park contacts assembly (2 speed)	WCA2	\$30.00

Bosch Planetary geared starter motor. Designed to fit even on Cooper S with oil cooler. Compact, light and very powerful. Based on a Bosch planetary geared starter originally designed and used for Ford 6 cylinder Falcon. It is guaranteed to start any Mini engine regardless of compression or bore size with ease. Repair parts for it are available at most auto electrical workshops that do repairs. Most race Minis in Australia today are fitted with one of these starters.
